

## CADDS ENGINEERING

### Company Profile

---

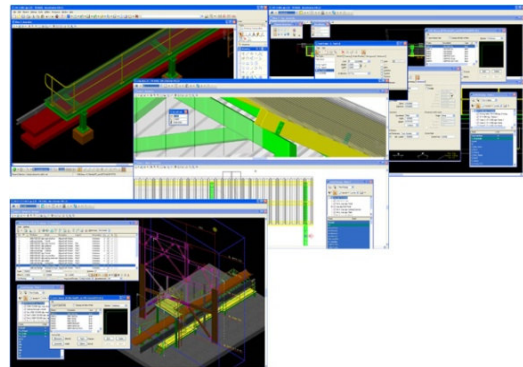

CADDS Engineering is a division of Computer Aided Design and Drafting Services Pty. Ltd. We have been offering high quality, cost effective design and drafting solutions since 1993, and have extensive experience in the mining industry, providing comprehensive drawings for many mine sites throughout Western Australia.

While the majority of work within the Engineering department of CADDS involves the mining sector, we also provide drafting services for smaller projects, catering to local industry and individual clients.

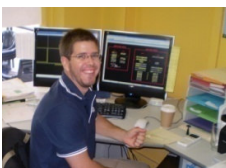

Our professional team of experienced draftspersons possess the ability to undertake a large variety of difficult and complex projects, and produce accurate, detailed working drawings to the specifications of the client.

CADDS Engineering strives to offer the best possible service, ensuring client satisfaction in many areas, including:

- 3D modeling (*including latest versions of Microstation, AutoCAD, Prosteel and Revit*)
- Structural Drafting
- Mechanical Drafting
- Electrical Drafting
- Civil/Geotechnical Drafting
- Piping and P&ID Drafting
- Site Services Layout Documentation
- Materials Handling
- Product Design
- Drawing Conversions (*Riotinto, BHP compliant or other customer specific standards*)
- Document Scanning and Vectorisation
- Safety and Information Documentation
- Site Support
- Engineering Certification (*Australian Standards and Client Specific*)

*"We are proud of our safety record and have maintained **zero** incidents since the company was formed in 1993".*

Safety is, and always will be, the number one priority for CADDS management and employees, resulting in a constant familiarisation with our client's safety requirements. We have a detailed Safety Management System in place, which stresses that all staff are required to operate within the confines of our SMS. Many staff members have undergone numerous safety training courses, including Confined Spaces Access and Safe Working at Heights.

Manager Darren Clark has a firm belief that his staff must be stimulated intellectually and undergo constant growth. This has proved a great success as is evident by our exceptional staff retention.

**Rio Tinto Award “Excellence in the provision of Intellectual Services and Overall Winner 2008”**

From more than 10,000 possible suppliers CADDs Engineering was honoured to be a finalist for this award in 2007 and were thrilled not only to win our category, but be the overall winner for 2008.

We believe in part we have been privileged with this award due to our consistently high standards and efforts we make to meet and exceed our customer expectations, but more than that our staff have a “can do” attitude and are often on a plane to visit a mine site with only hours notice to site measure an urgent project.
