

CADDS wins Rio recognition award

Prize: CADD'S managing director Alan Moody accepts the award from Rio Tinto Iron Ore chief executive Sam Walsh.

Computer Aided Design and Drafting Services (CADD'S) was announced the winner of the Intellectual Services Category for the Rio Tinto Iron Ore Supplier Recognition Program. In addition CADD'S was awarded the coveted prize of overall winner.

The award was accepted at the Rio Tinto Supplier Recognition Program 2008 Awards Function at the Duxton Hotel, Perth.

This follows the company's nomination as a top three finalist last year.

Computer Aided Design and Drafting Services is the parent company for four businesses, including CADD'S Engineering, CADD'S Architectural, Australian Energy Efficient Building Consultants and Australian Documentation Custodian Services.

With many companies reducing staff and making cut backs, CADD'S is continuing with growth and looking forward to a bright future.

"Our young and enthusiastic team of

designers, draftspersons and sustainable building consultants are constantly striving to achieve the most innovative and efficient solutions for our clients," CADD'S managing director Alan Moody said.

CADD'S' Hamersley journey began some 17 years ago in 1992 when Mr Moody went to Paraburdoo on a two-week contract which was continually extended and ultimately lasted over a year.

Subsequently CADD'S was formed and the company has since provided drafting services to Rio Tinto for more than over 16 years.

"Much like Rio Tinto itself we have undergone tremendous growth and now have over 25 staff," Mr Moody said.

"(It is) a credit to manager Darren Clark who has done a tremendous job managing CADD'S Engineering over the last decade. Darren is a dedicated professional who is technically outstanding and leads by example. We now use the latest 3D structural modelling software

adding value to each project we undertake."

But along with its engineering business, CADD'S Architectural has also achieved great success and has produced working drawings for some of the major buildings around Perth including the award-winning Manhattan Apartments and the soon to be completed Condor Towers Apartments.

Building, architectural manager Tracy Marshal has constantly produced exceptional design solutions to every project she is involved with as well as managing a team of technically brilliant Architectural Technicians who have produced drawings for many of the leading architects, developers and private clients in Western Australia.

"Use of state-of-the-art Architectural Modelling software has enabled us to give our clients high quality architectural renderings as well as highly technical and accurate working drawings," Ms Marshal said. ■

An exciting new chapter in the CSG story

- Emerging CSG explorer
- Pilot projects adjacent to producing gas fields and pipelines
- Large prospective acreage in the coal-rich Bowen Basin
- Exposure to untapped Indonesian CSG resources
- Well-funded to pursue further exploration and appraisal
- Entry point to the booming CSG sector

Since 1977 Barclay Engineering has been specialising in industrial noise control for the mining, building and oil and gas sectors in Australia and overseas. With the advance of acoustic technology Barclay Engineering has expanded further into the Australian and International industrial and commercial markets, completing "Turnkey" projects involving mechanical designs.

Barclay Engineering has a research and development department which has designed, tested and proven a range of standard products as well as many custom built components to suit most industrial, commercial and marine acoustic applications.

Products & Services

- Oil & Gas Projects
- Power Generation Projects
- Mining Projects
- Gas Turbine Enclosures & Exhaust Systems
- Industrial Steel Fabrication
- Design Engineering & Drafting Services

- Marine Ventilation & Exhaust Systems
- AHU/HVAC Enclosures & Equipment
- Heavy Mining Equipment & Rail Acoustics
- General Industrial Projects
- Custom Engineering Solutions
- Commercial Projects
